

# **New - Ultimate Ghost Holster**

## **\$250.00**

***The Ghost Holster is a secure, lightweight, and unobtrusive design that can be precisely adjusted to the shooter's body and draw style. The draw from this holster is fast!. With this holster, the gun is located in the best position to consistently draw with extreme speed for each individual shooter. Now with the new "ultimate" style, no hole is required in the trigger guard.***

***The holster has a locking mechanism that enables the shooter to determine the level of gun availability. When "locked," the gun is secured in the holster - it cannot be knocked, wrenched, or in any way jarred out of position. When "unlocked," the gun is released only when you lift up on the gun during your draw. It is still secure in the holster and will not be dislodged by a bump from the side or rear. A unique feature of this holster is that it can be locked down and then unlocked very quickly as part of the natural motion of the draw. The lever attached to the locking mechanism is moved upward by your middle finger during the draw. This allows you to lock the gun down if a stage requires you to start sitting or requires running before drawing the gun, and still allows you a speedy draw.***

### ***Picture of the locking mechanism:***

***The holster is adjustable along three axes, and the entire gun can be moved up and down:***

- 1) It can be canted in or out***
- 2) The muzzle of the gun can be rotated forward or back***
- 3) The entire gun can be rotated clockwise or counterclockwise***
